

Project Overview

I completed a month-end bank reconciliation for Garden Co for March 2026 using QuickBooks Online.

The process began by recording Garden Co's cash register transactions, including deposits and payments, in QuickBooks Online. I then uploaded the March 2026 bank statement into QuickBooks Online and began the reconciliation process by comparing the bank activity against the transactions recorded in the cash register.

Step 1 — Record Cash Register Transactions

Before beginning the reconciliation, I recorded the March cash register activity in QuickBooks Online.

This included:

- Customer deposits
- Business payments
- Checks issued
- Other cash transactions recorded during the month

This created the accounting records that would be compared against the bank statement.

Step 2 — Upload the March 2026 Bank Statement

I uploaded the March 2026 bank statement into QuickBooks Online to begin the bank reconciliation.

I compared the transactions appearing on the bank statement against the transactions already recorded in the cash register.

Step 3 — Identify Transactions Missing From the Cash Register

During the comparison, I identified three bank transactions that appeared on the March bank statement but had not been recorded in the cash register:

Date	Bank Transaction
03/28/2026	Monthly Service Charge
03/30/2026	E-Banking Monthly Fee
03/31/2026	Interest Earned

These transactions were reconciled by recording them in the cash register/QuickBooks Online so that the accounting records reflected the activity shown on the bank statement.

Step 4 — Identify Outstanding Cash Register Transactions

I also identified transactions recorded in the March cash register that did not appear on the March 2026 bank statement.

Date	Transaction	Amount
03/20/2026	City Storage Yard LLC — Storage yard rent, Check #1017	\$600.00
03/21/2026	City Water & Power — Utilities, Check #1018	\$50.00
03/31/2026	Deposit from Undeposited Funds to Checking	\$900.00

These transactions were treated as outstanding March reconciling items because they had been recorded in the accounting records but had not yet appeared on the March bank statement.

Based on the timing of the transactions, they would be expected to appear on the subsequent bank statement in April 2026.

Step 5 — Reconciliation

I used the identified differences to complete the March 2026 bank reconciliation in QuickBooks Online.

The reconciliation process involved:

1. Comparing the bank statement with the QuickBooks cash register.
2. Matching transactions that appeared in both records.
3. Recording bank activity that had not yet been entered into QuickBooks.
4. Identifying outstanding transactions recorded in QuickBooks but not yet cleared by the bank.
5. Reviewing the remaining difference.
6. Completing the reconciliation once the records were appropriately matched.

Key Findings

The reconciliation identified two types of differences:

Bank activity not yet recorded in QuickBooks

- Monthly Service Charge — March 28
- E-Banking Monthly Fee — March 30
- Interest Earned — March 31

QuickBooks transactions not yet appearing on the bank statement

- Storage yard rent — \$600.00
- Utilities — \$50.00
- Checking deposit — \$900.00

The second group represents timing differences rather than necessarily indicating errors. Transactions recorded in the accounting records may clear the bank in a later period (April).
